# TOP REASONS

Companies are Switching from Traditional to Open Networking

01.

## Greater Flexibility

Open networking offers flexibility, enabling organizations to choose the best solutions for their specific needs.

By decoupling hardware and software components, open networking, resulting in reduced upfront and operational costs, especially in the long term.

## 02. Cost Savings

Open networking models connect more easily with diverse hardware and software, simplifying integration for smoother technology transitions.

03.

## Interoperability

With open networking, companies are not tied to a single vendor, giving them more freedom and flexibility in their network management.

## 04. Free from Vendor Lock-in

## 05. Faster Innovation

The open standards architecture and community-driven development models enable faster innovation cycles.

Disaggregated networking allows for greater agility in deploying new features and services independently in both hardware and software solutions.

## 06. Improved Agility

## 07. Scalability

Open networking provides scalability to accommodate growing data demands and business expansion.

Open networking enables efficient resource utilization by decoupling hardware and software components, aiding organizations in minimizing waste.

## 08. Better Resource Utilization
