

S9710-76D

400G DISAGGREGATED CORE AND EDGE ROUTER

The UfiSpace S9710-76D is a 36 x 400G disaggregated open router providing carrier feature support including Ethernet OAM, IP/MPLS, VPLS and more that evolves the network to a 400G network, which enables next generation of 5G services and applications. The S9710-76D can be deployed as a standalone device or within a core switching cluster as a "line card" element within the distributed disaggregated chassis.

As a standalone router, the S9710-76D can be deployed at the edge network to enable transport services over a scalable next generation Telecom network. It is also suitable for central office data centers and general network aggregation. When coupled with UfiSpace's fabric switch, the S9710-76D becomes a building block for the distributed disaggregated chassis (DDC). The DDC allows network service providers to implement a pay-as-you-grow model when scaling core network capacities with a S9710-76D cluster scaling up to 691.2Tbps.

The S9710-76D disaggregated core router uses the Broadcom J2C+ chipset, which provides 16GB deep buffering and 14.4Tbps switching capacity. It includes a knowledge-based processor (or TCAM) to perform up to 16 parallel searches to reach decision speeds of multiple billion decisions per second, which makes it ideal for provider edge applications. As a core router, the S9710-76D enables fault and performance monitoring, non-stop routing support for control and data plane, and comprehensive high-availability networks.
