800G DISAGGREGATED CORE AND EDGE ROUTER

The UfiSpace S9720-56ED is a 18 x 800G disaggregated open router that evolves the network to a 800G network, which enables next generation of 5G services and applications. The S9720-56ED can be deployed as a standalone device or within a core switching cluster as a "line card" element within the distributed disaggregated chassis.

As a standalone router, the S9720-56ED can be deployed at the edge network to enable transport services over a scalable next generation Telecom network. It is also suitable for central office data centers and general network aggregation. When coupled with UfiSpace's fabric switch, the S9720-56ED becomes a building block for the distributed disaggregated chassis (DDC). The DDC allows network service providers to implement a pay-as-you-grow model when scaling core network capacities with a S9720-56ED cluster scaling up to 921.6Tbps.

The S9720-56ED disaggregated core router uses the Broadcom J3 chipset, which provides 16GB deep buffering and 14.4Tbps switching capacity. As a core router, the S9720-56ED enables fault and performance monitoring, non-stop routing support for control and data plane, and comprehensive high-availability networks.
